

# FAQs

The sMiles app is a real app, and their website has a real FAQs section. However, it's not very comprehensive, so I made up some additional FAQs.

## **How do I get paid?**

You don't need to do anything! When you install sMiles, you're prompted to connect your favorite fitness apps, like Google Fit. Once you connect your step counter apps, you can hit the pavement. You'll be rewarded automatically. If you're having trouble connecting sMiles with other apps, check out our help section.

## **Can I get rewarded for other activities?**

Walking and running are the only activities eligible for rewards. Keep an eye out for an update to the app coming soon! We have some big changes planned that will reward users for riding their bicycles.

## **Can I play chess against other sMiles users?**

Not yet. We hope to make this feature available in future updates, but for now, it's you against the chess computer.

## **How do I withdraw my sats from sMiles?**

If you have a default wallet such as Wallet of Satoshi, BlueWallet, or Muun connected to the app, the process is simple. Just hit the "Send sats" button and then follow the "Send to default wallet" prompt. Enter the number of sats you want to send on the next screen, and click the blue "Send" button. Your sats are sent over the Lightning Network to your default wallet.

If you want to send sats to a friend, the easiest way is this:

1. Click "Send manually."
2. Click "Scan QR Code."
3. Have your friend show you the QR code generated by their wallet. It might look like this picture:

4. Enter the number of sats you want to send.
5. Bask in your friend's gratitude!

### **How is sMiles able to pay users?**

We get revenue from ad sales, convert it to bitcoin, and reward our users with it.

### **What is a sat and why is it called that?**

A “sat,” short for satoshi, is named after Satoshi Nakamoto, the pseudonym used by the creator of Bitcoin. Just like a dollar can be divided into cents, one bitcoin can also be divided into smaller units. A satoshi is the smallest unit into which one bitcoin can be divided. It is one hundred millionth, or .00000001 of a bitcoin.

### **Why bitcoin?**

We reward our users in bitcoin because it's the first decentralized, peer-to-peer currency in history. There will only be 21 million bitcoin ever, so even one satoshi could buy a lot some day. We think everyone deserves to have a little piece of this revolutionary money!
